

**FOR CUSTOMERS
WHO DEMAND THE BEST**

SS Gravity Filter

For customers who do not have a reliable pressurised mains water supply, whether it is at home, on a campsite, or in a holiday cottage, a gravity filter enables you to have clean filtered drinking water on tap. Water is poured manually into the upper chamber. It passes through the filter candles under pressure of gravity into the lower chamber where the filtered water can be accessed via a tap on the front of the filter.

Made from high grade polished stainless steel, the SS Gravity Filter is a portable, robust model, which is easy to keep hygienically clean. The SS is very popular with aid organisations and private customers alike.

- 💧 The SS is fitted with 2, 3, or 4 filter candles depending on the flow rate required (more candles = higher flow rate).
- 💧 When fitted with Sterasy!™ filter candles, the output of the SS, assuming regular refilling of the upper chamber, will be approximately as follows:
 - 💧 2 candles – 11 US gallons (40 litres) per 24 hours
 - 💧 3 candles – 16 US gallons (60 litres) per 24 hours
 - 💧 4 candles – 21 US gallons (80 litres) per 24 hours
- 💧 All SS filters have four holes to enable the fitting of up to 4 candles.
- 💧 The holes which are not in use are filled with removable rubber bungs.
- 💧 As standard, the SS takes candles which are 7 inches long, 2 inches in diameter, with a long mount and a wing nut.
- 💧 The SS should be fitted with either Sterasy!™ or Super Sterasy!™ candles.
- 💧 For ease of transport, the upper chamber fits into the lower chamber to save space.
- 💧 The capacity of the lower chamber is 3 US gallons (10 litres).
