Drinking Water Filters

- Bottled water quality on tap in your own home.
- Long-life filters. Great value for money.
- Simple to install, use and maintain.
- No power required. Low running costs.
- Eco-friendly, reusable filter cartridges.
- 175 years experience. A proven brand you can trust.

Healthy water for a healthy life.

Quality ceramic filters made in England.
Yesterday...

In 19th Century England, the River Thames was London’s main water supply and sewer.

Henry Doulton discovered that filtering water through a porous ceramic could stop people becoming sick from cholera and other water-borne diseases.

This was a revolution in water treatment.

Today...

Fast forward 175 years and the ceramic filtration technology has advanced a long way, but the principles of our ceramic filters remain the same - providing safe, healthy, great-tasting drinking water wherever and whenever you need it. From a mud hut in Uganda to an office block in Utah, Doulton® and British Berkefeld® filters are working round-the-clock to provide millions of people with water they can enjoy and trust.

Quality Standards

Manufactured in England by Fairey Industrial Ceramics Limited under ISO conditions to ensure product consistency and reliability, Doulton® and British Berkefeld® filters regularly undergo rigorous testing both in our own laboratory facilities and by independent laboratories to ensure that our customers receive first class products every time.

Independent quality control approvals such as the NSF International standard 42 and 53, and WRAS approval ensures that product performance claims are verified to the highest level. See NSF mark for specific products.
Healthy water
healthy life

Experience the difference that drinking healthy water could make to you

Doulton® and British Berkefeld® filters offer you bottled water quality on tap 24 hours a day. Our unique ceramic filtration technology produces drinking water of unrivalled quality.

All of our filter grades have been microbiologically tested. Most grades also remove chlorine and improve the taste and odour of the water, while others use lead absorbive media to take out toxic lead specifically and other heavy metals. See performance table for full details.

Healthy water that doesn’t cost the Earth

Bottled water is expensive to buy, produces a lot of plastic waste, and the carbon footprint of transporting those bottles of water is enormous.

Installing a filter system in your home offers a much greener as well as cheaper alternative way of drinking good quality water. However, even most filter systems require frequent replacement of plastic cartridges / housings, which can itself generate a considerable amount of plastic waste. Our approach is different.

By using long-life reusable filter housings fitted with long-life reusable filter elements made from natural materials, we are able to cut down on waste as well as giving you better value for money.

The secret is that the ceramic shell of our Doulton® and British Berkefeld® filter elements can be scrubbed clean many times, extending the life of the filter element and meaning that you do not have to replace your filter so often. Good water without the environmental or financial cost.

The right solution for you

We aim to provide a drinking water solution suitable for every situation; whether you need a filter unit fitted underneath your sink, in the back of your water cooler, sitting on your counter top, or mounted on your wall. You can even take our gravity filters to places where there is no running water at all.
## Filter Housings

### Under-Counter Filters

**HIP** (Food Grade Plastic)
- **Connections**: ¾ inch push fit inlet & outlet suitable for ⅛ inch flexible plastic pipe
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with short threaded mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

**DUO** (Food Grade Plastic)
- **Connections**: ¾ inch push fit inlet & outlet suitable for ⅛ inch flexible plastic pipe
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with short threaded mount
- **Number of filter candles**: 2
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

**HIS-PUSH FIT** (All Stainless Steel)
- **Connections**: ¾ inch push fit inlet & outlet suitable for ⅛ inch flexible plastic pipe
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with short threaded mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

### Counter-Top Filters

**HCS** (Stainless Steel Body, Chromium Plated Brass Base)
- **Connections**: Diverter valve fits onto most common threaded kitchen mixer taps
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with short threaded mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

**HCP** (Food Grade Plastic)
- **Connections**: Diverter valve fits onto most common threaded kitchen mixer taps
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with short threaded mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

**ICP** (Food Grade Plastic)
- **Connections**: Diverter valve fits onto most common threaded kitchen mixer taps
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 212mm long x 2¾ inches (67mm) in diameter with double O-ring mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

---

*Please refer to filter performance table for flow rates for specific candle grades.
### Gravity Filters

**LP2 (Food Grade Plastic)**
- **Connections**: Water is poured manually into the upper chamber
- **Filter Candle Grade**: Sterasyl*, Super Sterasyl* or ATC Super Sterasyl*
- **Filter Candle Type**: 7 inches (178mm) long x 2 inches (49mm) in diameter with long threaded mount & wing nut
- **Number of filter candles**: 2
- **Output**: Approximately 20 litres per candle per 24 hour period

**SS (Stainless Steel)**
- **Connections**: Water is poured manually into the upper chamber
- **Filter Candle Grade**: Sterasyl*, Super Sterasyl* or ATC Super Sterasyl*
- **Filter Candle Type**: 7 inches (178mm) long with long threaded mount & wing nut
- **Number of filter candles**: 2 or 4 filter candles depending on flow rate required
- **Output**: Approximately 20 litres per candle per 24 hour period

### Wall-Mounted Filters

**HIS (Stainless Steel Body, Chromium Plated Brass Head)**
- **Connections**: ½ inch BSP threaded inlet & outlet
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with short threaded mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

**HBA MkI (Nylon Coated Aluminium)**
- **Connections**: ½ inch BSP threaded inlet & outlet
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with long threaded mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

**HBA MkII (Food Grade Plastic)**
- **Connections**: ½ inch BSP threaded inlet & outlet
- **Filter Candle Grade**: Any
- **Filter Candle Type**: 10 inches (254mm) long x 2 inches (49mm) in diameter with long threaded mount
- **Number of filter candles**: 1
- **Output**: Approximately 300 litres per hour at 3 bar (45psi) pressure*

*Please refer to filter performance table for flow rates for specific candle grades.
Filter Elements

Which grade of ceramic filter do I need?

Doulton® and British Berkefeld® ceramic filters elements are available in 5 grades:

- Sterasyl™
- Super Sterasyl™
- ATC Super Sterasyl™
- Supercarb™
- Ultracarb™

The grade you ultimately choose will depend on which contaminants you want to remove from the water.

Which format of ceramic filter element do I need?

There are three ceramic filter formats: Candle, Cartridge, and Rio 2000 module. The filter format you need will depend on the type of filter housing you are using and the flow rate you require.

Candle

Candles have a domed end and a plastic mount on the top to fix them into the filter housing. The type of mount as well as the length and diameter of the candle will be dictated by the filter housing.

All Doulton® and British Berkefeld® filter housings use candle format filter elements. Please see Filter Housings section for more details.

Candle Dimensions

Candles are available in 2 standard lengths: 10 inch and 7 inch. Bespoke lengths can be accommodated subject to minimum runs.

Candles are also available in 2 standard diameters: Slimline (2 inches or 49mm) and Imperial (23/4 inches or 67mm).

Candle Mounts

Candles are manufactured as standard with 1/4inch BSP threaded long or short mounts.

Cartridge

Cartridges (OBEs) have a plastic mount and rubber washer at both ends. They are designed to fit industry standard 10 inch filter housings.

Other types of mount can be manufactured to match specific filter housings. Details are available on request.
**Rio 2000 High Flow Module**

The Rio 2000 is a proprietary module designed to fit an industry standard 10 inch jumbo housing. The module is reusable so that only the 6 incorporated mini Sterasyl™ filter candles need to be replaced.

The increased ceramic surface area available for filtration of these multiple candles offers superior flow rates - approximately 1500 litres (390 US gallons) per hour at 4 bar (60 psi) pressure.

*NSF approved replacement elements are Doulton Sterasyl*, Doulton Supercarb* and Doulton Ultracarb* as verified by testing in HP/Inline systems.
Why a ceramic filter?

The small and complex pore structure of Doulton® and British Berkefeld® ceramics makes them an ideal filter medium for drinking water:

**High Efficiency Filter:**
Doulton® and British Berkefeld® filters are capable of removing more than 99.99% of pathogenic bacteria, disease causing cysts such as Cryptosporidium and Giardia, and particles. See performance data table.

**Long Life/Value for Money:**
As confirmed by the user instructions supplied with the product, the outer shell of Doulton® and British Berkefeld® ceramic drinking water filters may be cleaned in order to prolong the life of the product. In this way, the filter can be re-used rather than replaced, giving it a much longer life-span than many other products on the market, saving you money. On average, a Doulton® or British Berkefeld® filter candle will remain effective for at least 6 months (depending on usage and water quality) before it will need to be replaced.

**Anti-Bacterial Action:**
FICL's ceramics contain a proprietary system to inhibit microbiological growth, meaning that there is no need to sterilise Doulton® or British Berkefeld® ceramic filters.

**Retains Essential Minerals:**
Doulton® and British Berkefeld® ceramic filters keep those minerals in the water, which are beneficial to health.

**No Power Required:**
Doulton® and British Berkefeld® drinking water filters do not require electricity to function, which means that they are cost-effective to run, are not vulnerable to interruption of power supplies, and can be used where there are no power supplies.

---

Multistage filtration in one filter cartridge:

**Stage 1**
Outer Shell - Micro Filtration

**Stage 2**
Anti-Bacterial formula within the ceramic matrix inhibits microbiological growth

**Stage 3**
Activated carbon in the Super Sterasyl™, ATC Super Sterasyl™, Supercarb™ and Ultracarb™ takes out chlorine and organics improving taste and odour

**Stage 4**
Ultracarb™ and ATC Super Sterasyl™ also contains lead removal media, which takes out toxic lead
